# Pawly

## Project Description

**Pawly** is a mobile application designed to provide a complete digital ecosystem for pet owners and veterinary professionals. The platform allows users to manage their pets and their health information, access veterinary services, purchase pet products, and discover animals available for adoption.

The application supports three main user roles: Pet Owners, Veterinarians, and Administrator . Pet owners can manage multiple pets within their account, while veterinarians can create professional profiles and provide veterinary services. Administrators supervise and manage the platform, users, and content.

Pawly brings together pet management, health monitoring, veterinary appointments, e-commerce, and animal adoption in one mobile application to  improve the user experience.

## The 5 Main Modules

### 1. user Management ： Rached Trabelsi

This module manages all users and their roles within the PetLife platform.

**Pet Owner**

A pet owner can create an account and manage multiple pets.

The owner can:

- Create and manage their profile
- Add multiple pets
- View their pets' information
- Manage personal information
- Manage contact information
- View appointment history
- View orders
- Manage adoption applications
- Receive notifications

Each owner can have multiple pets, and each pet has its own health and medical information.

**Veterinarian**

Veterinarians are users with a specific professional role.

They can create a professional profile containing:

- Name
- Specialization
- Experience
- Clinic or workplace
- Location
- Contact information
- Working hours
- Services offered
- Availability
- Professional verification status

**Administrator**

The administrator manages and supervises the platform.

Admin functionalities include:

- Manage users
- Manage pet owners
- Manage veterinarians
- Verify veterinarian profiles
- Activate/deactivate accounts
- Manage reported accounts or content
- Monitor platform activity
- Manage categories and system information

## 2. Veterinary Services & Appointments : Islem Zbidi

This module connects pet owners with veterinary professionals and manages the complete appointment process.

**Veterinarian discovery**

Pet owners can search and filter veterinarians according to:

- Specialization
- Location
- Services

- Availability
- Rating

They can view the veterinarian's professional profile before making an appointment.

**Appointment management**

Pet owners can:

- Select a veterinarian
- Select their pet
- Choose a service
- View available time slots
- Book an appointment
- Cancel an appointment
- Reschedule an appointment
- View appointment history
- Receive appointment notifications

**Veterinarian side**

Veterinarians can:

- Define their working hours
- Manage availability
- Accept or reject appointments
- View upcoming appointments
- View the pet's relevant health information
- Record consultation information
- Prescribe treatments
- Update vaccination records

# 3. Vaccination & Health Monitoring:

This module allows pet owners and veterinarians to maintain a complete digital health record for each pet.

Each pet has an independent health profile containing its medical information.

**Health records**

The system can store:

- Medical history
- Previous illnesses
- Allergies

- Weight
- Medical documents
- Consultations
- Treatments
- Vaccinations
- Health observations

**Vaccination management**

The veterinarian can record:

- Vaccine name
- Date administered
- Next recommended date
- Dose/details
- Notes

The owner can view the vaccination schedule and receive reminders when a vaccination is approaching.

The veterinarian determines the recommended vaccination schedule, while the owner manages the appointment and follows the reminders.

**Treatment management**

Veterinarians can create treatment plans containing:

- Medication
- Dosage
- Frequency
- Start date
- End date
- Instructions
- Additional notes

Owners can consult their pets' current and previous treatments.

## 4. Pet Store : Samar Gouader

This module provides an integrated marketplace where users can purchase products for their pets.

**Product management**

Products can include:

- Pet food
- Toys
- Accessories
- Hygiene products
- Grooming products
- Care products
- Other pet supplies

Products can be organized into categories with:

- Name
- Description
- Price
- Images
- Stock
- Category
- Availability

**Customer functionalities**

Pet owners can:

- Browse products
- Search products
- Filter by category
- View product details
- Add products to cart
- Place orders
- Make payments
- View order history

## 5. Adoption Feed : Wafa Gharbi

The Adoption Feed is a dedicated social-style feed where users can discover abandoned, rescued, or available-for-adoption animals.

Instead of being a simple list, the feed can work similarly to a social media feed, where each animal is presented as an adoption post.

**Adoption posts**

An authorized user, veterinarian, shelter, or association can publish a pet containing:

- Photos

- Name
- Species
- Breed
- Age
- Gender
- Location
- Health condition
- Vaccination status
- Personality
- Special needs
- Description
- Adoption status

**Feed functionalities**

Users can:

- Browse adoption posts
- Search for animals
- Filter by species
- add comments
- View pet details
- Save/favorite animals
- Share adoption posts
- Contact the responsible person
- Submit an adoption application

**Adoption application**

Instead of directly adopting an animal, the interested user submits an application.

The application can contain:

- Living situation
- Type of accommodation
- Previous experience with pets
- Existing pets
- Available time
- Reason for adoption
- Additional information

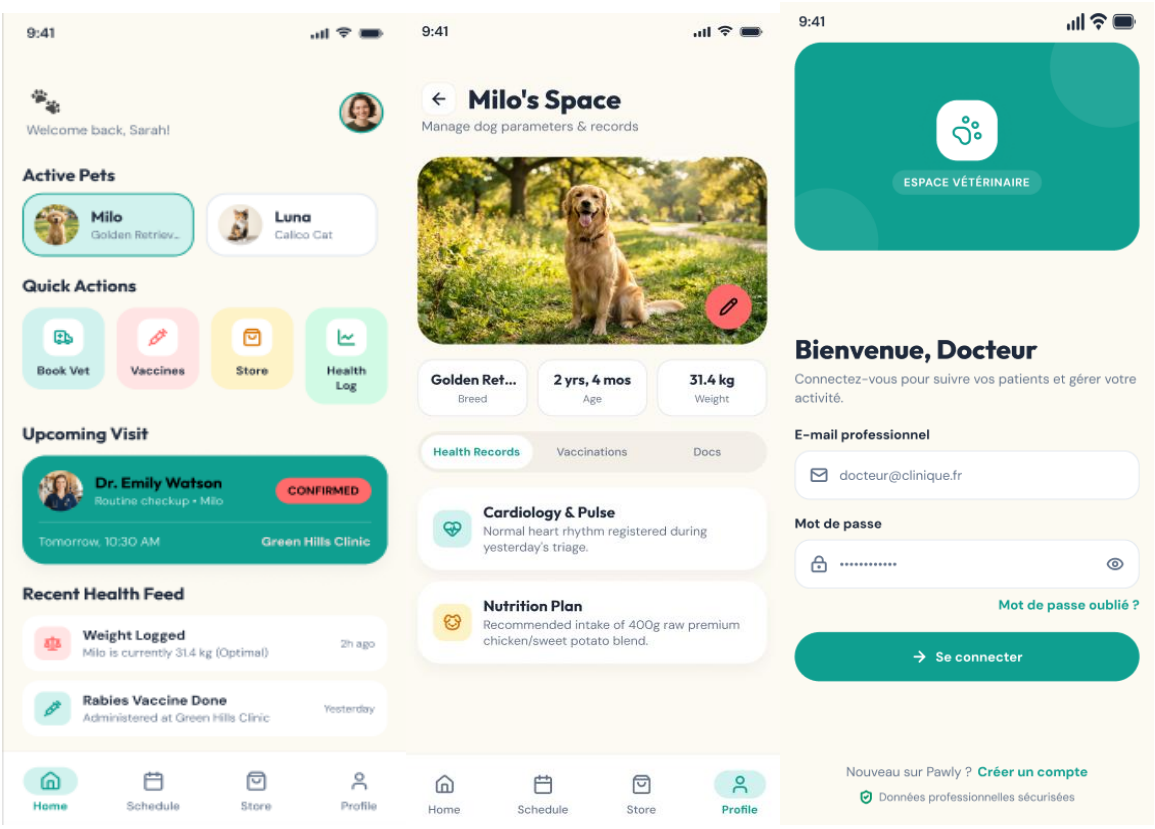

The responsible person can review the application and update its status.

Once an animal is adopted, its post is marked as Adopted and is no longer shown as available.

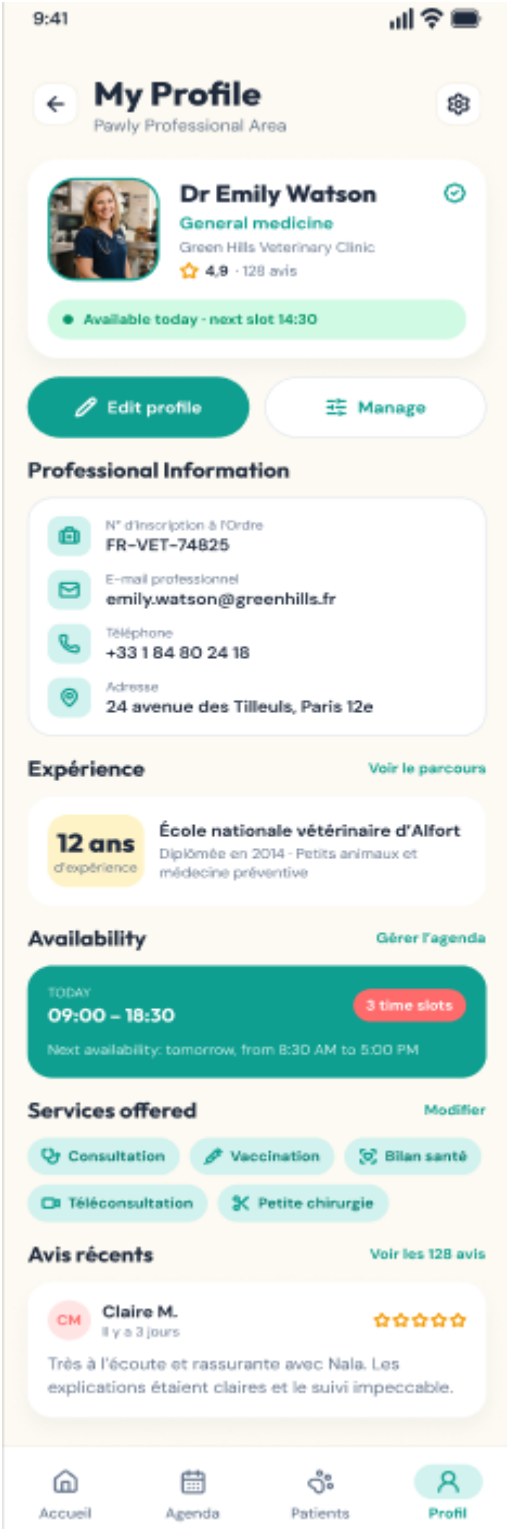

# Mobile App Mockups

## 1. user Management :

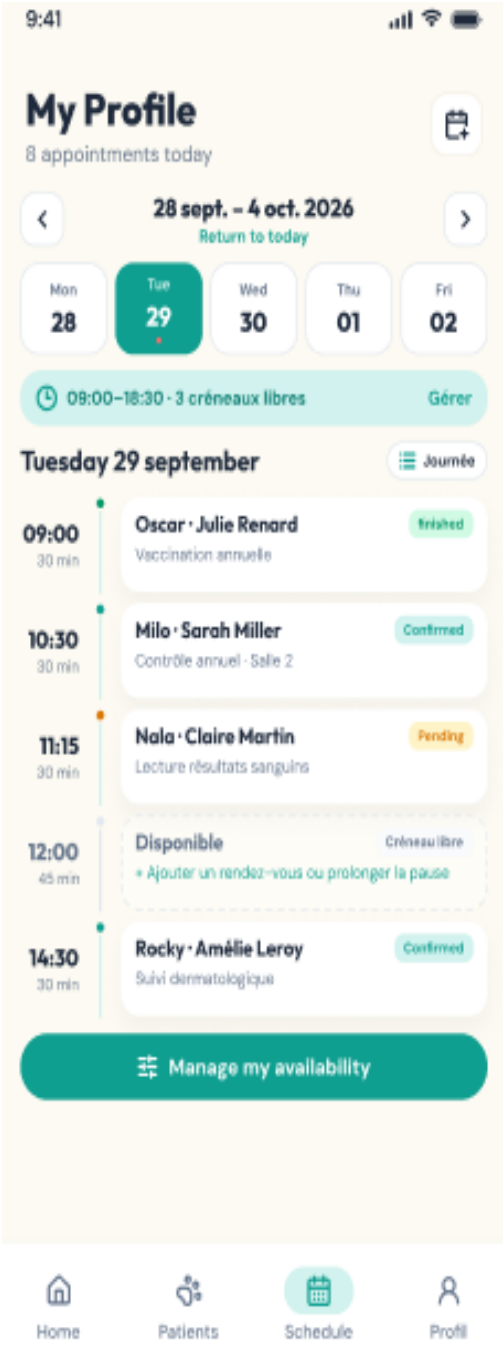

**home dashboard** **pet profile** **vet sign in**

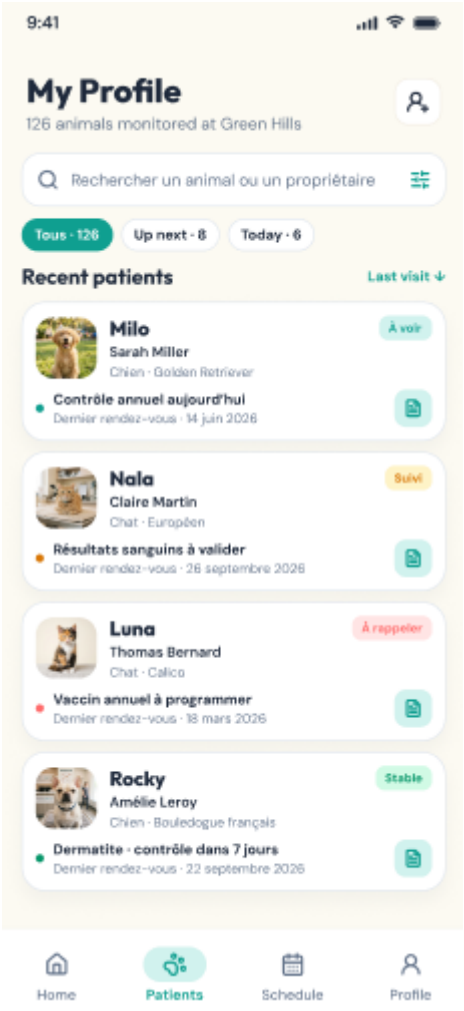

**vet profile**

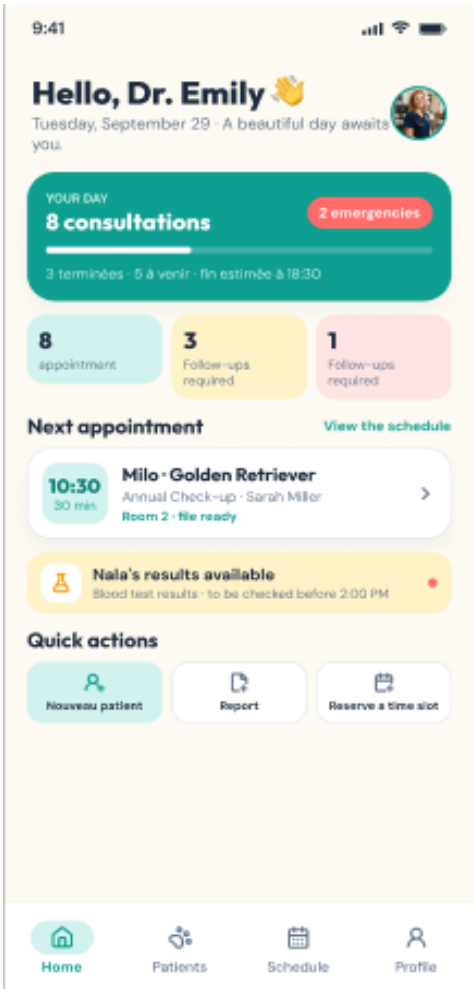

**vet calender**

**vet patients list**

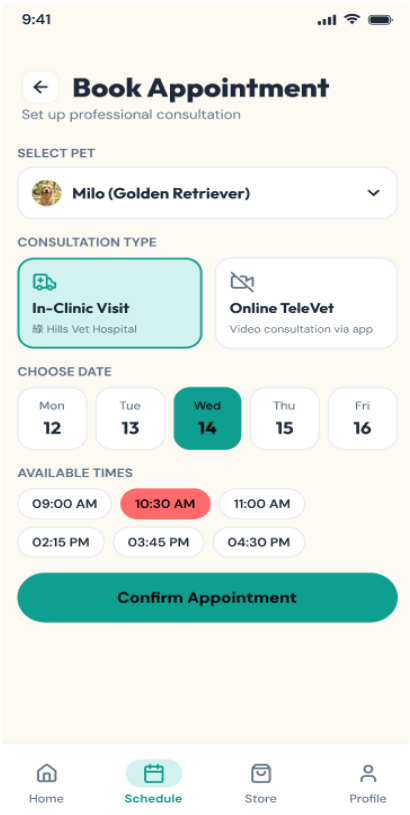

**vet home page**

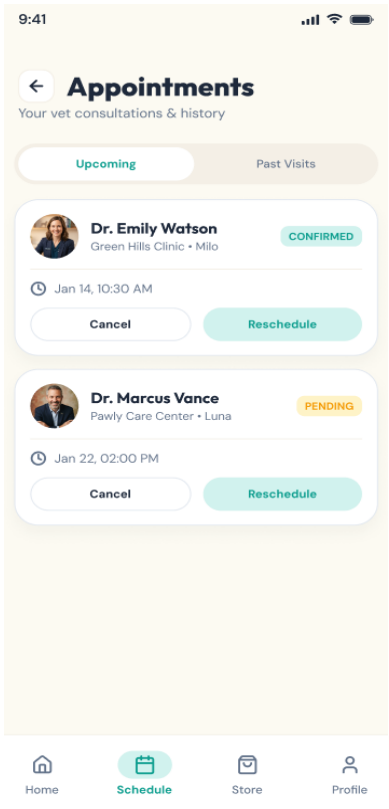

## 2. Veterinary Services & Appointments :

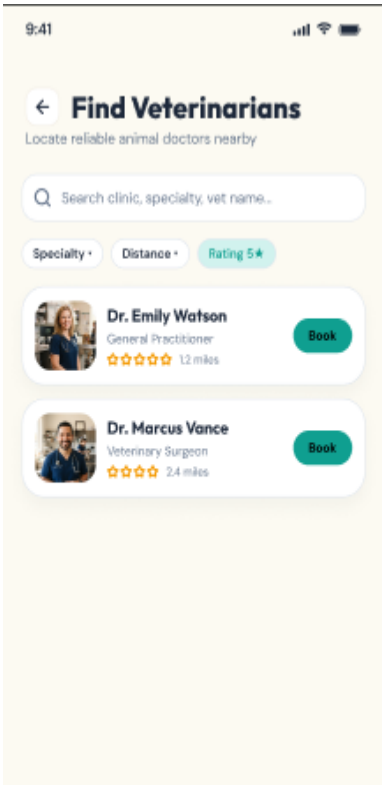

**confirming appointment**

**consulting pet appointments**

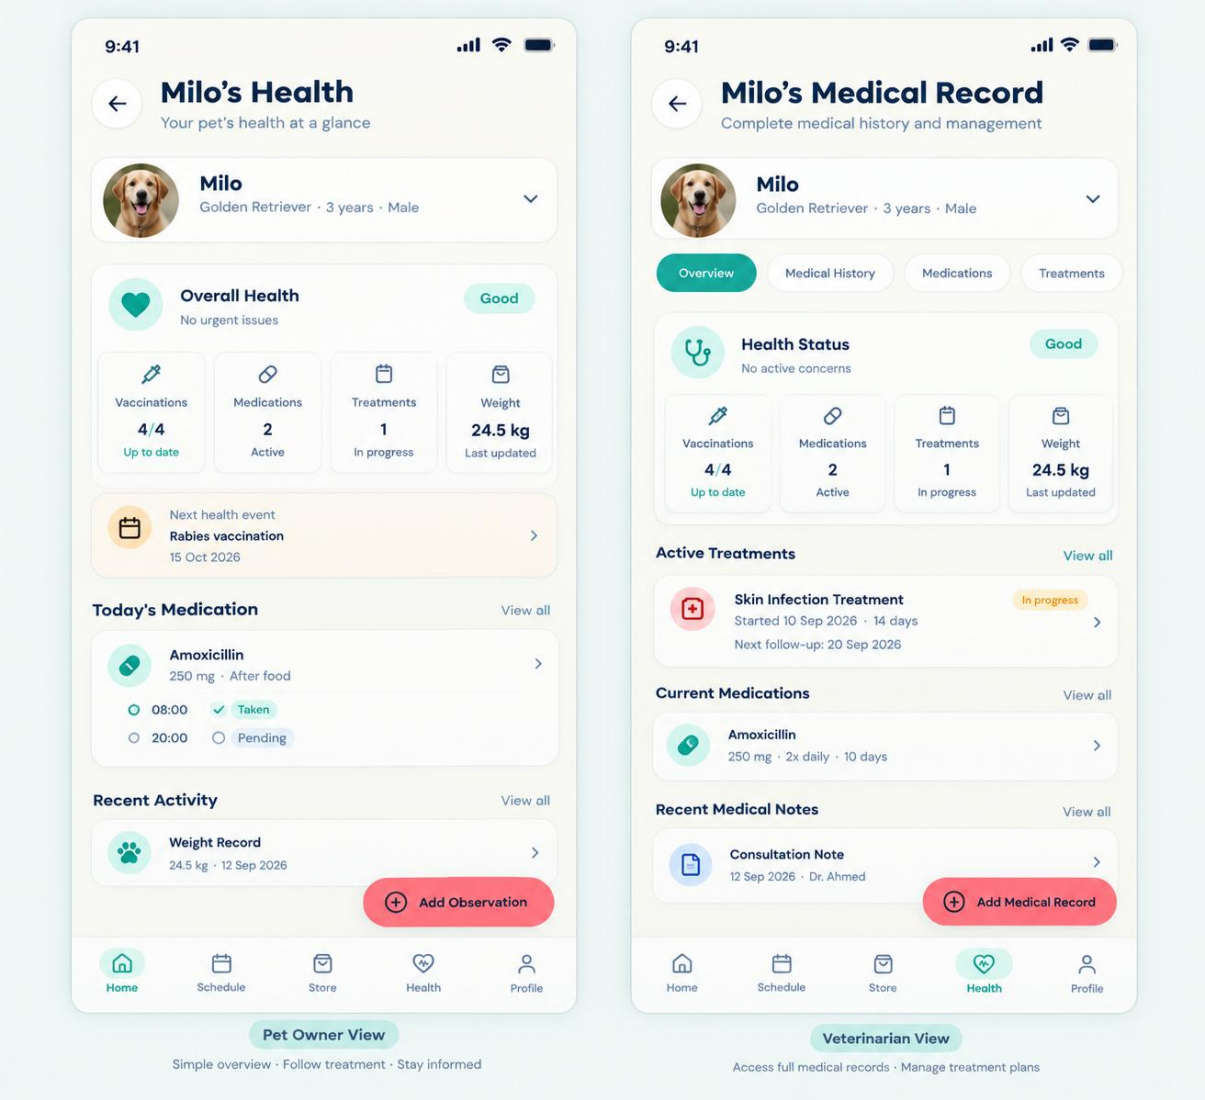

**searching vet**

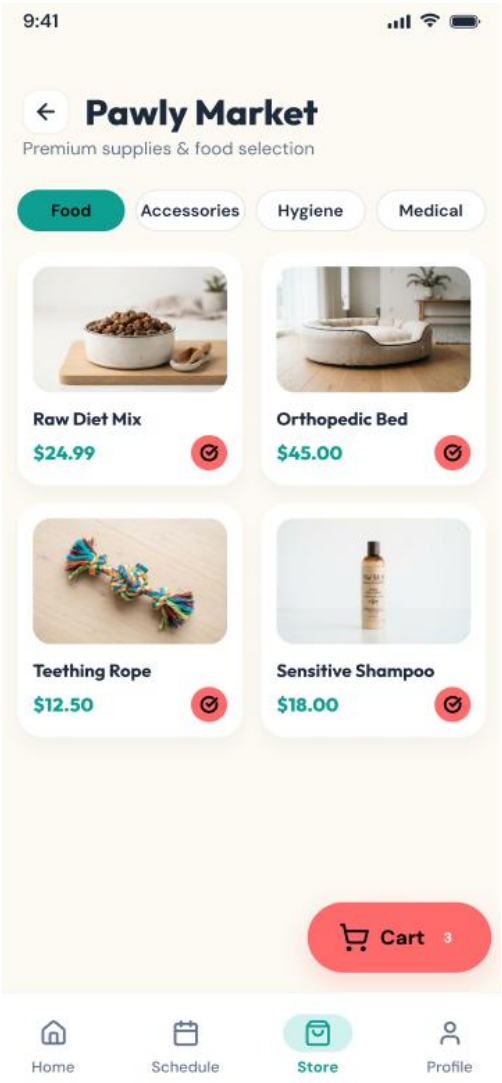

## 3. Vaccination & Health Monitoring:

**Pet's medical record**

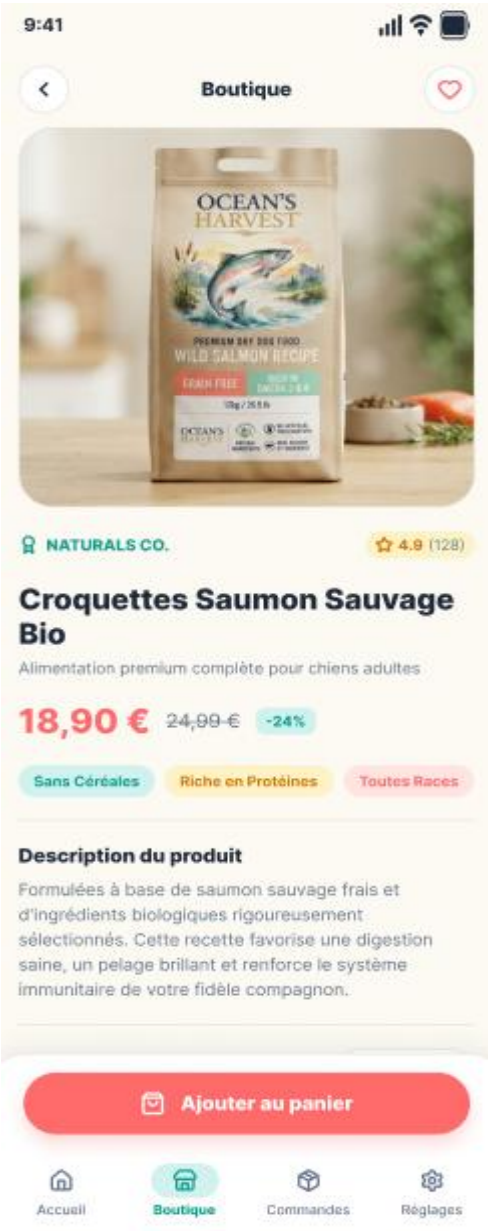

# 4. Pet Store :

**pet store**

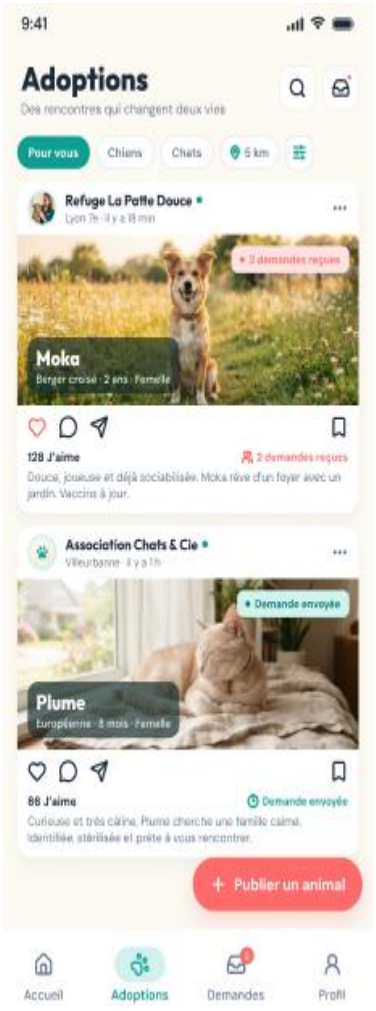

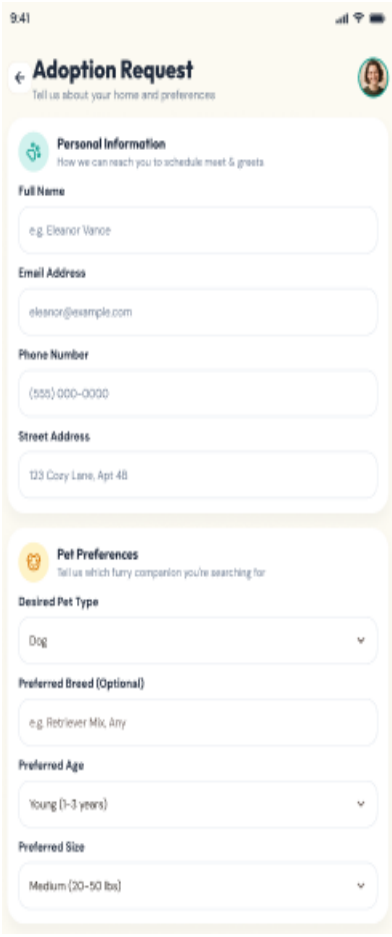

**store product details**

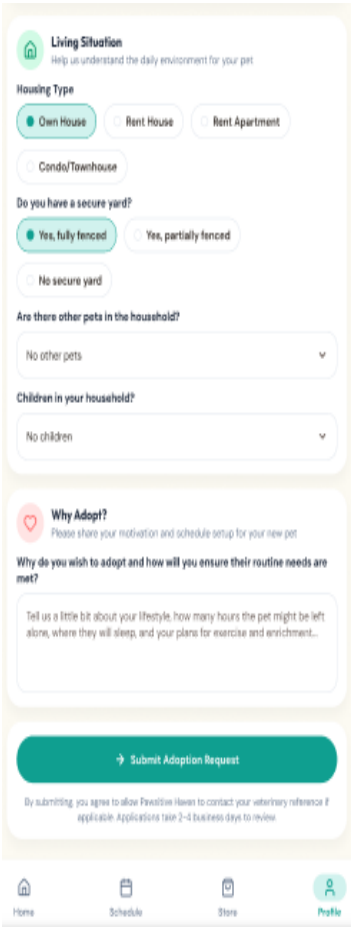

## 5. Adoption Feed :

**adoption feed** **adoption request** **adoption request**

**accounts management**
